#### I. FORWARD

The Intercollegiate Council on Intergroup Relations is the coordinating group for the Haman Relations Committee at the colleges and universities of the Milwaukee area. It makes it possible for these committees to come to grips with human relations problems which transcend the campus and are community-wide in scope. The Council having conducted several projects since its inception in 1952, was exploring what might be done for 1955 when its attention was focused by a request from Mr. William Kelly of the Urban League for a study of the housing of Negroes in Milwaukee. Such other members of the community who serve the Council in a consultive capacity as Mr. Corneff Taylor of the Milwaukee Commission on Human Rights, and Mr. Maurice Terry of the National Conference of Christians and Jews agreed that such a project would constitute a contribution toward community self-knowledge and potentially toward its betterment.

At a general meeting, the Intercollegiate Council decided that a study of the housing of Negroes should be undertaken, not only for its civic value but also for its legitimate expansion of the education and human relations experiences of participating students. The subcommittee listed below was then gathered as the continuing group to conduct such a study.

Numerous meetings were held in order to clarify objectives; develop a questionnaire, the major research instrument; draw up sampling lists of households, etc. This subcommittee wishes to acknowledge with gratitude the interest and aid which the individuals and agencies mentioned above generously tendered; financial support

from the National Conference of Christians and Jews for secretarial and-duplicating expenses; and the encouragement of Professor Rudolph Morris of the Sociology Department, Marquette University, who is the moving spirit of the Council.

Sister M. Rebecca, OSF, Alverno College Dr. Joseph W. McGee, Marquette University Dr. Fred Kaufmann, Milwaukee School of Engineering Chairman: Dr. Irwin D. Rinder, Wisconsin State College, Milwaukee

#### II. THE PROBLEM OF HOUSING

#### A. Some Perspectives

In this decade attention in intergroup relations has been increasingly directed toward the housing of minority, particularly racial groups in our population. Restrictive practices, designed to hamper the settlement of "undesirable" citizens except in the areas hitherto reserved for them, have resulted in the confinement of large numbers of Americans into racial, ethnic, and cultural enclaves, usually in the most physically deteriorated portions of our cities. Originally attracted to the low rental housing in these areas, members of racial minorities in particular find that, once within them, it is difficult if not impossible to find housing elsewhere in the city. Arbitrary barriers hamper their spatial mobility and residential location.

relations problems in the United States are frequently gloomy or pessimistic over man's inhumanity toward man. Granting that home sapiens is somewhat lower than the angels, may we not find in these very problems some small reason for optimism. For example, there are no problems in human relations where these relations are static. Where the relationships between racial groups are unambiguously and unchallangeably ordered by slavery or a caste system, individual but not social problems of adjustment may occur. It is only when the older structurings of relationships have broken down and are in the process of flux that problems arise, signifying that people are perplexed by new situations for which there does not exist any traditional or pet answer. In a democracy.

especially one as dynamic as our own, there shall always be problems. Minority problems are those we happen to inherit from the breakdown of the group and status definitions of preceeding eras.

Negro-white relations in the contemporary United States are perhaps in a greater state of change and transition than at any time since the period immediately following the Civil War. At that time, a status quo of white super - and Negro subordination was soon reestablished in the post-bellum period, in the South most firmly but throughout the nation generally. Whites regained the reins of economic and political control; in this they were supported by the Plessy vs. Ferguson decision of the Supreme Court which established the doctrine of "separate but equal," thus life was resumed and polarized into segregated racial spheres under the sanction of law.

In this century, the shifts in Negro population attendant upon—the reduction of immigration, the industrial demands of two world wars, the enhanced economic and political position of a Negro population increasingly urbanized and educated, and the spotlight glare of world interest in the domestic affairs of the mation spokesman for democracy, have all contributed to the discruption of many long established patterns of inequality inherited from the past. Our awareness of many problems and our many national efforts toward working out adjustments and readjustments signify that new equilibriums of accommodation on higher planes of equality are developing between races.

#### B. Race Relations in General

In An American Dilemma, the definitive study of Negro-white

relations in the U. S., Myrdal found it conceptually valuable to organize systematically the discriminations which whites maintained as the "rank order of discriminations." This ranking was headed by those activities which whites generally felt were most personal and intimate like marriage and sociability; ranged through less personal activities like the use of public facilities, protection by courts, police, etc., political participation; and finally concluded with discrimination against economic participation. For the white population, this rank order states the order of intensity of feeling and strength of resistance toward equal Negro participation in these areas of life activity. Myrdal and his associates felt that the rank order of importance for Negroes was reversed, i.e., that they felt most strongly about those discriminations which were at the bottom of the white list and were least concerned about those to which whites assigned priority.

orrect, (they have received some validation in empirical studies) they lead to a prognosis of easier accommodation between Negroes and whites over the short haul, since the points of greatest immediacy and pressure for equal rights for Negroes coincide with the points of least resistance from whites. However, as yesterday's aspirations become today's accomplishments the order of priorities moves upward and the resistance stiffens. Our strides in improving vocational opportunities, access to the ballot, and participation in government, and most recently in improving education have brought us to the place where we must face the demand for a free housing market - the right of the individual citizen to live

wherever he can afford to locate and wherever vacancies exist.

For the member of the dominant group, housing is perhaps, the topic where the claim for equality of treatment by the sub-ordinate group becomes less a matter of abstract principle (principles which Myrdal called the higher values of the "American Greed"), remote in its consequences, and becomes something closer to home with all the implications of both urgency and intimacy which this term connotes. As one leading textbook flatly states in its section on housing, "The major and most dangerously explosive area of conflict between groups in the United States is over living space."

bursts, even though this has sometimes been the case. We have learned that proper utilization of such community representatives as employers, educators, clergy, and police acting in full awareness of their responsibilities can make for peaceful accommodation despite the violent gestures and utterances of extremists. The overwhelming majority of Americans respect individual civil and property rights when these have been explained to them and where the authorities clearly indicate their intention to guarantee those rights.

In summary, the existence of minority problems should not distress or depress us - indeed, they are evidence of vitality - but the providing of appropriate arenas in which these problems may be worked out, and the perpetuation of those institutionalized

Brown and Roucek, One America, N. Y.: Prentice-Hall, Inc. (3rd edition), Chapter 17, "The Bases of Conflict: Housing," p. 460.

procedures and safeguards which maximize democracy, these must be the renewed concern of each generation. Among the techniques which aid our realization of the potential for rational action is research. Differences in values and points of view will continue but, insofar as research findings replace speculation and myth, there will be some common frame of discourse.

#### C. Housing Problems in Particular

While slavery continued in the United States, status relations between whites and Negroes were (with the exception of the small number of Freemen) unambiguously relations between superiors and subordinates. Paradoxically, this system produced greater physical proximity between these groups than was to be the case in the post-emancipation period. Where the social system does not structure relationships, man must improvise informal or non-legal techniques to do this job for him so long as he chooses to perpetuate these invidious physical (racial) distinctions of status.

If social distance - the keeping of others at arm's length - was to be maintained both literally and figuratively, then the maintenance of physical distance through segregation was the most convenient technique available. Segregated housing has been among the most important techniques employed in perpetuating status differences between races in the United States. Housing is ordinarily stratified socio-economically by the market so that most residential areas have a clear character as "upper class," "middle class," and the like. With regard to race, the market mechanism was not deemed sufficient to ensure the maintenance of

X

the character of an area so various other methods have been resorted to. Negroes, even when they can afford to, do not find it easy to move out of the racial ghetto. The syllogism of social distance which provides the rationale of this restrictive policy is approximately as follows. Since all Negroes, according to racist dogma, are categorically defined as members of a group of lower status; and since one's own status depends in part upon where one lives and who one's neighbors are; and since residential propinquity implies equality (except where the proximate individual is clearly subordinate as a menial or domestic, when their presence paradoxically heightens status); then Negro residents lower the social prestige of a community and the status of its white residents. Hence Negroes must be kept out or they jeopardize one's social standing: much else is rationalization of this basic proposition.

Segregation by municipal ordinance (regulated by legislative fiat, not unlike present day South Africa's policy of apartheid) seems to have been a hastily conceived stopgap response to the large scale Negro migration to northern cities which received impetus with the first world war. After a Supreme Court decision in 1917 declaring this manuever unconstitutional, the line on segregation was held through the makeshift of race restrictive covenants. These individual commitments, made contractually, limited the resale of real estate purchases to specified groups only, usually identified as caucasian. Restrictive covenants were not able to contain the Negro population within prescribed bounds, but they did delay and hinder movement.

In 19h8 the Supreme Court again destroyed the foundation under practices which denied equality of opportunity in housing by declaring the race restrictive covenant unenforceable in the courts of the land. The removal of this last remaining legal prop of segregation denotes an important accomplishment, but it does not close the story. So long as individuals harbor antipathies toward other individuals because of their group identify; so long as racial stereotypes and myths are perpetuated, e.g., those concerning cleanliness, honesty, morality, and other personal traits and the effect of certain residents upon property values; that long will man's ingenuity be misguided in the perpetration of barriers against democracy in housing. It is unfortunate that the quasi-military terminology of ecology is so descriptive of minority housing phenomena; minority movement into an area is characterized as "invasion" and the concommitant movement of old residents out of that area is labelled "flight." The ghetto expands, its frontiers shift, and it becomes more commodique; but residential segregation continues with a new set of boundaries.

So frequently has the above description of movement and countermovement been the pattern, it is hardly surprising that the layman has often concluded that racial isolation is a necessary response of human nature. That this pattern is neither inevitable nor salutory is evidenced by the increasing number of instances, of racially integrated housing which have appeared this past decade. Municipal housing projects in many locales testify to the possibility and realization of the peaceful integration

of diverse peoples into communities. This is not entirely voluntary since it is, in these municipalities, a policy-based, inseparable condition of public low-rent housing; it is, nonetheless, encouraging. The paradoxical import of this development in racially integrated housing - and it should be sobering to the rest of the population - is that the best progress is being made among the lowest socio-economic segments of the population. This most poorly educated and traditionally most prejudiced portion of the nation has become a surprisingly successful laboratory in human relations. On the middle class scene, recent developments (like the Hyde Park-Kenwood Community Conference on Chicago's southeast side and its counterparts in other cities) testify that men of good will can maintain their property, maintain and even improve community esprit de corps regardless of the skin color of neighbors, providing they apply their diligence, their reason, and the democratic and religious principles which they profess.

#### III. THE CITY AND THE SAMPLING

At the time of the 1950 decennial census, the city of Milwaukee consisted of 222 census tracts and 587,472 inhabitants. The nonwhites in the city were 22,742 in number and of these, the largest part by far, 21,772 were Negro. While this is not a large Negro population in either an absolute or proportional sense, it does represent a considerable increase over the previous census figure of 8,821; an increase of 145% in the ten year interval between censuses. While this population increase was taking place, the non-white occupied dwellings tabulated by the census increased only 79%, intensifying an already crowded condition.

That the Negro population is residentially segregated in Milwaukee is very apparent, for the same census of 1950 shows that 11,961 of the Negroes in Milwaukes reside within four census tracts (20, 21, 29, and 30). In other words, 55% of Milwaukee's Negroes are located within less than 2% of its census tracts. It hardly requires the computation of a chi square statistic to prove that this degree of concentration is not random, i.e. the result of chance or accidental residential location. Furthermore, as Table 3 shows, the number of census tracts in all which contain as little as 1% or over Negro residents total only 29; all but a negligible number of Milwaukee's Negroes are to be found within 13% of the city's tracts.

In Chapter II, Section 3 it was asserted that the degree of residential segregation has been even greater since emancipation than it was during slavery; and since the north was able to create this pattern from the beginning of interracial contact in

X

significant numbers, segregation is more complete in parts of the north than it is in the south. The following table shows one of the ways this segregation can be quantitatively determined along with some representative findings. Although the data treated below is new outdated, there is no reason to believe that the indicated trend has undergone any change. In fact, with the increasing number of Negroes leaving the rural south for the urban north there is some basis for feeling that the concentration and segregation may have become even more intensified.

<sup>\*</sup> from Homer Hoyt, "The Structure and Growth of Residential Neighborhoods in American Cities," 1939, pp. 66-67.

Milwaukee did not appear in the original of this table but its inclusion resulted from the computations made by the Citizens' Governmental Research Bureau of Milwaukee, based on the 1940 census. This agency also found that a 1945 census taken by the Milwaukee Health Department in tracts 20 and 21 indicated segregation was more

concentrated than it had been five years earlier, i.e. an increase from 75.4 to 80.4% of the nonwhite population living in blocks of three-fourths or more nonwhite occupancy.1

In view of this extraordinary pattern of distribution (or rather lack of distribution) of Negroes in Milwaukee, the research staff of the present project was confronted with a number of perplexities which had to be resolved. From the very outset it was agreed that scientific sampling was to be the only method of securing cases rather than any less objective method which might allow bias to influence the selection of cases and diminish the validity of Since Milwaukee is fortunate in having its census the findings. data tabulated by census tracts2 and the further convenience of a census tract street index.3 area sampling through the selection of random house numbers in any particular tract was not only feasible but routine.4 The major problem was to allocate the available resources most efficiently. Since the Council was depending upon volunteer student help for the field work, an early estimate of the number of interviews likely to be collected was set at 400. different amounts being assigned as quotas to the several schools in line with their size and facilities.

Citizens' Governmental Research Bureau, Milwaukee's Negro

Community, Milwaukee, rexographed, 1946.

2 Census tracts are small areas, having a population usually between 3,000 and 6,000, into which certain large cities have been subdivided for statistical and administrative purposes. An attempt is made to get them fairly uniform in size and in population composition.

The census tract street index tells the names of the streets and the house numbers which fall within each of the tracts of the city.

<sup>4</sup> The randomly chosen house numbers did not always represent a dwelling occupied by Negroes. The interviewers were instructed to use the house number as a starting point from which to proceed to the next higher number until a Negro respondent was found.

How best distribute the anticipated 400 cases? Simple random sampling over the city would neglect the single most salient fact that the Negro population is not uniformly distributed over the city. On the other hand a weighted sample, in terms of the actual proportion of the Negro population found in different tracts, would be heavily weighted with cases from the small number of tracts of greatest concentration. This would result in only a minute sampling of those Negroes who reside in areas of sparser Negro settlement, e.g. 1 or 2% of our 400 cases would be so few as to present a formidable potential sampling error. Since it was deemed important to gain adequate information about these latter areas some compromise in sampling technique was necessary.

The procedure finally adopted was that of weighting the sample so that the tracts of heaviest Negro occupancy received the greatest amount of investigation but not the entire amount indicated by a literal arithmetic weighting. This would give some emphasis to size but would also ensure a modest rather than infinitesimal representation for areas of small Negro inhabitance. The city's Negro population was divided into four groups on the basis of the proportion of Negro to white residents. Those census tracts with 50% or over Negro population constitute zone 1; tracts with 25-50% Negro residents became zone 2; from 10-25% Negro in population composition became zone 3; and from 1-10%, zone 4. The tracts comprising each zone and the percentage of its population recorded as Negro in the 1950 census are described in Table 3.

The number of cases arbitrarily allocated to each zone, the

number actually realized through the field work, and the division of responsibility among the cooperating schools will be found in Table 2.

The research tool, a questionnaire, is included in this report as Appendix 1. The student interviewers met at Marquette University one evening where the purposes of the study and the general sampling procedure were explained. The questionnaire was reviewed by holding a mock interview between student and householder and an attempt was made to clear up any questions and to anticipate and provide for problems which might arise. Some of these students had participated in the early phases of research formulation but for the most participation was limited to the collection of data.

<sup>\*</sup> Tracts actually sampled in Zone 4. All tracts were sampled in Zones 1, 2, and 3.

.

#### IV. RESEARCH FINDINGS

#### A. Method of Presentation

This chapter contains the substance of the study and an endeavor has been made to present it as meaningfully as possible. In all cases, unless otherwise noted, the data has been organized by our scheme of four zones (see Table 3) to enable comparisons and contrasts to be made between the characteristics of Negroes living in areas of differing racial concentration. Furthermore, where it has been possible to get comparative data on whites and Negroes from the census, these have been included. This census material helps us establish the base line for those trends in social phenomena which may be observed to vary—with location in the city and it helps us compare the material on Negroes with that derived from the tracts in general. The following cautions must however be borne in mind.

- (1) The census data was collected five years earlier than that for the present study and this may introduce some variation in results, e.g. changes in income, education, rent, etc. However, this difference between studies will be constant in its effect from zone to zone.
- (2) The data for this study is sample data rather than complete enumeration and was collected by relatively inexperienced staff. Error may be introduced through inadequacies here.
- (3) Where comparisons between the population of the tract as a whole and the nonwhite sample within the tract is made, the extent of difference between the two is reduced by the fact that the data for the former (tract as a whole) includes nonwhites as well as whites. The larger the concentration of nonwhites, the more is the differentiation obscured.

Since the census material on nonwhite housing was obtained through a sampling of selected census tracts, and since this

sampling was made only in those tracts with an appreciable nonwhite population, census data was not forthcoming from all tracts in which we are interested. This is particularly true of Zone 4 where we had to employ data from certain tracts other than the ones in which our own survey material was actually collected. We must assume in this instance that these other tracts are comparable to our own. The actual tracts contained in the zonal scheme employed for censelidating census data is as follows: Zone 1 - 20, 21, 29, 30; Zone 2 - 35, 36; Zone 3 - 19, 31, 52; Zone 4 - 22, 53, 73.

#### B. Type of Structure and Number of Occupants

From the census we learn that the distribution of white and Negro residents is as follows.

TABLE 4. DISTRIBUTION OF WHITES AND NEGROES IN CITY AND SELECTED TRACTS

| Population | City of | Milwaukee     | Zone   | 1   | Zone  | 2   | Zone  | 3   | Zone   | 4   |
|------------|---------|---------------|--------|-----|-------|-----|-------|-----|--------|-----|
| White      | 565,700 | 96 <b>%</b> . | 3,804  | 24% | 6,573 | 55% | 9,345 | 82% | 11,938 | 91% |
| Negro      | 21,772  | 4             | 11,961 | 76  | 5,298 | 45  | 2,086 | 18  | 1,047  | 9   |

This table gives a clear portrayal of the extent of Negro concentration in certain census tracts near the central portion of the city. It also shows how this concentration, both in absolute numbers and in proportion of the population, diminishes steadily as one moves outward from the center.

| TABLE 5. | CENSUS REPORT | ON AGE O  | F STRUCTURES |
|----------|---------------|-----------|--------------|
| •        | BY YEAR IN    | WHICH BUI | LP           |

| Year Built         | Milwauk | 80           | Zone  | e 1          | Zone  | 2  | Zone  | 3  | Zone        | <u>L</u> |
|--------------------|---------|--------------|-------|--------------|-------|----|-------|----|-------------|----------|
| Total<br>Reporting | 184,926 |              | 3,690 | <b>, .</b> . | 2,930 |    | 2,850 |    | 3,715       |          |
| <b>1940-</b> 1949  | 16,700  | 9%           | 45    | 1%           | 4 -   | 1  | 25    | 1% | -           |          |
| 1930-1939          | 12,165  | 7            | 235   | 7            | 80    | 3% | 5     | _  | <b>2</b> 25 | 1%       |
| 1920-1929          | 41,250  | 22           | 290   | 8            | 300   | 10 | 5/10  | 8  | 425         | 11       |
| 1919 or<br>earlier | 114,250 | 6 <b>2</b> ⁄ | 3,120 | 84           | 2,550 | 87 | 2,580 | 90 | 3,265       | 88       |

The evidence of this table points to the fact that housing in each of the four zones is about equally archaic from the point of view of date constructed, and each shows about the same amount of aged structures and the same paucity of new construction percentagewise. In both instances, there is an appreciable departure from the norm for the city as a whole.

persons per household than the city sverage and that this crowding is greatest in Zone 1 and decreases as we move out through the other zones. The "persons per room" measure which is the census formula for measuring crowding, i.e. over 1 person per room is crowding, shows approximately the same picture except that the crowding figure jumps for zone 4 and is even slightly above the measure for zone 1.

In other words, although zone 4 averages a smaller population per household than the others, this household is crowded into even fewer rooms.

#### C. Maintenance

The census does not inquire into maintenance although it is interested in the state of repair or disrepair of structures. Our study did obtain some information about the responsibility for maintenance, recency of decorating, etc. and this will be described in the tables which follow. The general import of these data is to document a great deal of similarity between zones. The exception to this is the somewhat longer time required in zone 3 for the making of repairs after a complaint has been lodged.

#### D. Facilities: (1) Plumbing

The census provides us with the following information about plumbing facilities.

TABLE 10. CENSUS DATA ON PLUMBING FACILITIES BY CITY AND SELECTED TRACTS

| · · · · · · · · · · · · · · · · · · ·        |                             |                       |            |            |                            |                         |                            |           |                   |
|--|-----------------------------|-----------------------|------------|------------|----------------------------|-------------------------|----------------------------|-----------|-------------------|

These data continue to point up what has been found previously; that zones 1, 2, 3, and 4 show a greater incidence of blight,

deterioration, or less adequate facilities than is found over the rest of the city. Furthermore, this table shows that within these zones, Negroes possess a greater share of these undesirable facilities than they constitute a percentage of the population, e.g. Negroes are 70% of the population in zone 1 and they report 75% and 80% of the dilapidated or absent plumbing facilities in that zone. If the Negro population was not such a large percentage of the total population in zone 1, the Negro disproportion of blight might be shown to be even larger. The following data from our own study finds that Negro residents, regardless of their tract and zone location have quite similar plumbing facilities.

| Not heated             | 485 -      | 15    | -   | -     | -          | 15   | -   | 10   | -   |

Before discussing anything else about the table above, we must give a priority to the category "Not Heated." Although the unheated homes are a negligible percentage of total homes in Milwaukee, or within each tract for that matter, they nevertheless total 40 cases for these four zones composed of 12 census tracts. These 40 cases are nearly 10% of the total number in the city, and they were garnered, as were all of the housing data, through a 20% sample of Milwaukee households. Since this 20% sample was randomly procured, we may with some safety project this finding and conclude that 10% of all cases of unheated dwellings are located in the four zones containing the bulk of the Negro population.

The remainder of the table recapitulates the same trend present in all other census findings, that the four zones have a greater incidence of non-centrally heated structures than the city average and that this rate decreases as we move out from the center. Our own survey findings presented below fail to show any consistent trend or differentiation between zones for Negro respondents with the exception of the greater frequency of central heating and of coal as a fuel in zone 3.

| TABLE 15. (cont | inued) |
|-----------------|--------|
|-----------------|--------|

|              |                                 | Zone 1  | Zone 2       | Zone 3     | Zone 4  |  |
|--------------|---------------------------------|---------|--------------|------------|---------|--|
| Question 20. | Number of cooking<br>oven as l? | burners | available,   | counting a | atove's |  |
| 1            |                                 | 2       | <del>-</del> |            |         |  |
| z´           |                                 | 1       | ] 1          | } -        | -       |  |
| 3            |                                 | 1       | 1            | 1          | -       |  |
| 4            |                                 | 45      | 18           | 1          | 8       |  |
| 5            |                                 | 83      | 81           | 114        | 20      |  |
| 6            |                                 | 3       | 4            | _          | 1       |  |

The modal number of burners is 5 and the median between 4 and 5 in every zone.

#### (5) <u>Perishable Food Storage</u>

The census again provides us with some material based upon its 20% sampling of households.

TABLE 16. CENSUS REPORT OF REFRIGERATION FACILITIES FOR CITY AND SELECTED TRACTS

| Condition             | Ki lwa uke e | Zone 1    | Zone 2    | Zone 3            | Zone 4    |

The same two trends noted repeatedly appear here: less adequate facilities are found in greater proportions in these census tracts than in the city generally; these conditions show alleviation

the further from the zone we move. And once more, our survey statistics fail to uncover any consistent significant differences between the Negro residents of these tracts.

#### E. Recreation

Recreation is a useful measure, not only of available leisure and of the varieties of resources one can employ, but of socio-economic status as well. Generally, participation in voluntary organizations and recreational resources are positively correlated with income and education. This study employed a rather crude method of developing some index of recreation through the simple unit quantification and summing of activities and facilities which might be considered recreational.

TABLE 20.

Question 27. Which of the following do you own or employ? radio, phonograph, television, plano, other musical instrument, telephone, game equipment (ping-pong, billiards, scrabble, etc.), library, hobbies (list), automobile (make and year).

| No. Possessed | Zone 1 | Zone 2   | Zone 3 | Zone 4 |  |
|---------------|--------|----------|--------|--------|--|
| 1             | 25     | 7        | -      | 4.     |  |
| 2             | 21     | 11       | ı      | 5      |  |
| 3             | 26     | 20       | 2      | 6      |  |
| 4             | 28     | 27       | 9      | 4      |  |
| 5             | 23     | 21       | 2      | 7      |  |
| 6             | 5      | 18       | 3      | ı      |  |
| 7             | -      | 2        | -      | -      |  |
| 8             | 1      | <b>-</b> | -      | -      |  |
| 9 ·           | _      | 1        | _      | _      |  |
| Median        | 2.7    | 3.6      | 3.6    | 2.8    |  |

As can be seen from Question 27, we sought information not only as to the presence of an automobile but as to its make and year as well. There exists as part of the stereotype of minority characteristics (also applied to the inhabitants of alums in general) that

they are improvident, childlike, etc. and given to conspicuous luxury purchases. It was felt that we might find some evidence as to the validity of this belief. Our findings are as follows.

TABLE 21. DETAILED ANALYSIS OF INFORMATION ON AUTOMOBILES ELICITED BY QUESTION 27

| Price Range                                    | Zone | e 1        | Zone | 2      | Zone       | 3  | Zone       | Įţ |
|--|------|------------|------|--------|------------|----|------------|----|
| Low Priced Caral                               | 10   | 30         | 16   | 37     | 3          | 60 | 3          | 33 |
| Medium Priced Cara                             | 20   | 60         | so   | 46     | 2          | 40 | 6          | 66 |
| High Priced Cars                               | 3    | 10         | 7    | 17     | 0          |    | 0          |    |
| Median Age of Above Autom                      |      |            |      |        |            |    |            |    |
| Price Range                                    |      |            |      |        |            |    |            |    |
|  | 1950 | )-51       | 19   | <br>60 | 1956       | 0  | 195        | l. |
| Price Range Low Priced Cars Medium Priced Cars | 1950 | 0-51<br>51 | 195  |        | 195<br>194 |    | 195<br>195 |    |

We learn from the above that there is a marked similarity in the distribution of makes of cars (classified by price range) and the age of these cars from zone to zone. The exceptions are the greater concentration on low priced cars in zone 3 and the greater recency of low priced models in zone 4. Neither the age nor the number of cars

The following is a simplified classification adapted from Consumer Reports (Annual Automobile Issue), May, 1955, p. 221.

Low Friced Cars: Chevrolet 6 and 8, Dodge 6, Ford 6 and 8, Plymouth 6 and 8, Rambler, Studebacker 6 and 8,

Willys.

Medium Priced Cars: Buick, DeSoto, Hudgen, Mercury, Nash, Oldsmobile,
Pontiac, Chrysler.

High Priced Cars: Cadillac, Chrysler, New Yorker, Imperial, Lincoln,
Packard.

represented by these data lend much credance to the popular image of the racial slum as swarming with spanking new, pastel-tinted cadillac convertibles.2

One final datum to conclude this discussion of recreation.

The 1950 census, in its 20% housing sample, inquired about television with the following results.

TABLE 22. CENSUS FINDINGS CONCERNING DISTRIBUTION OF TELEVISION SETS

| Condition        | Milwaukee  | Zone   | ı         | Zone  | 2   | Zone  | 3   | Zone  | 4   |
|------------------|------------|--------|-----------|-------|-----|-------|-----|-------|-----|
| Number Reporting | 183,210    | 3,650  |           | 2,970 |     | 2,740 |     | 3,770 |     |
| With Television  | 43,765 24% | 505 11 | <b>∤%</b> | 610   | 21% | 500   | 18% | 785   | 21% |

In every one of our zones, the ownership of television sets is at a rate below that for the city as a whole. This finding, along with the prior one on automobiles does belie the stereotype which would lead one to expect large numbers of these possessions in the slums.

According to the 35th Edition (1955) of Automobile Pacts and Figures, published by the Automobile Manufacturers Association, there are 3.3 persons per passenger car registered in the U.S. Since this includes commercial, government, and multiple-car families, this works out to 71% of families owning cars rather than 1 per family as the figure 3.3 seems to indicate.

Zone 1 with 138 respondents reported 33 cars, zone 2 with 108 reported 43, 16 respondents in zone 3 totalled 5 cars, and 29 in zone 4 possessed in all 9 cars. Even on a per person basis this just equals the 1 car for 3.3 persons national average and when we further consider that these respondents represent larger units it seems certain that car ownership for Negroes is considerably below the national rate.

There are many interesting and plausible explanations and rationalizations which would enable one to account for a certain amount of luxury spending by slum dwellers or the residents of segregated areas. These point out that the very incongruity of the new and the shiny amidst the bleakness of these dilapidated structures makes them stand out in a fashion which perhaps exaggerates them in human perception. Or that new cars (a) are purchased on time, or are jointly purchased by several spending units pooling their resources, or (c) belong to wealthier individuals who purchase cars with the money they are not permitted to spend for new housing elsewhere, or (d) are a compensation mechanism for realizing status in a social milieu where many other avenues of status are shut off. or just seem to be present in large numbers because of the population density of the dwellings in these areas. 1.e. cars are crowded in the streets because their owners are even more crowded in the dwellings flanking that street, etc. While eminently reasonable, perhaps recourse to such explanations should not be made until it has been established by the facts that an explanation is needed.

## F. Some Attitudes and Experiences re Housing

TABLE 23.

Question 38. Have you tried to live elsewhere in the city unsuccessfully? that is, have you tried to own or rent and been turned down because of discrimination?

|     | Zone | 1  | Zone | 2  | Zone | 3  | Zone | 4  |

The data above and those which follow on neighboring are advanced more tentatively than any other in the study. Inquiry concerning attitudes is a useful and legitimate function of social science but requires greater methodological nicety by way of wording, interviewer training, response and nonresponse bias, verification and validation et al. than this study could marshall. However, our findings are presented as interesting and perhaps suggestive. The implication of the responses found above seems to be a slight tendency for the desire to live elsewhere in the city to be associated with the fact of living beyond zone 1, i.e. the farther from

the core of the segregated area, the greater the desire to leave it.

Of those who have considered building their own home and been unable
to, financial reasons rather than discrimination were almost
exclusively given. This might reflect the fact that many of these
persons were not in any financial condition to have actually attempted
home building and so had not yet been confronted with discrimination.

The answers to these loosely formulated questions on neighboring seem to indicate that contact with neighbors tends to decrease, moving outward from zone 1 but that friendliness with white neighbors tends to increase. The mathematical possibilities of having white neighbors of course increases along this gradient and whether the tendency toward friendly contacts increases accordingly or was simply verballized concommitantly is a question we cannot answer.

Once again, when comparing the subjects in the four zones we fail to find any consistent trend and are impressed by the frequent similarities which occur.

## H. Socio-Economic Status

As our baseline, it is again possible to make use of census findings on a number of phenomena which are usually considered indicis of socio-economic status.

TABLE 26. CENSUS DATA - MEASURES OF SOCIO-ECONOMIC STATUS

These data show the expected gradient between zones in education, income, rent, and median value of dwellings. We continue to find that these zones are substandard compared to the norms or averages which prevail for the city generally. And interestingly, although the median rent paid by Negroes in the city is lower than that paid by whites, nevertheless the evidence points to the fact that in comparable areas, Negroes are paying higher rents than whites for what we may assume are similar or inferior accommodations.

<sup>\*</sup> Where the census did not compute the median because of fewer than 100 cases, we computed it from the figures which are presented in the census.

<sup>\*\*</sup> Estimate, based upon unofficial computations explained above.

| Median         | · · · · · · · · · · · · · · · · · · · | <b>\$</b> 58 | \$69    | <b>\$</b> 75 | \$71 |

We are confronted once more with findings in our own survey which give a picture contrary to that derived from the census data. Whereas the census figures show consistent and continuous change toward improvement (socio-econemically speaking) as distance increases from the center of the city, our inspection of the Negro residents of these tracts and zones does not yield such clear trends. The data above on education, income, and rent show only a slightly higher tendency toward higher status for zones 2 and 3 as compared to zones 1 and 4; this is different from the usual gradient relationship which obtains between white occupied residential areas.

## I. Tenure and Home Ownership

In 1950, the census found the rates of home owning and renting for whites and nonwhites to be as follows:

TABLE 28. CENSUS RATES OF HOME RENTING AND OWNING BY WHITES AND NONWHITES

| Condition          | Milwaukee  | Zone  | 1  | Zone  | 2  | Zone  | 3  | Zone  | 4  |
|--------------------|------------|-------|----|-------|----|-------|----|-------|----|
| All Dwelling Units | 188,926    | 3,763 |    | 3,071 |    | 2,868 |    | 3,809 |    |
| Owner Occupied     | 79,945 42  | 1557  | 15 | 875   | 29 | 835   | 29 | 1,134 | 30 |
| Nonwhite Owners    | 1,195 1.5  | 393   | 71 | 436   | 50 | 125   | 5  | 103   | 9  |
| Renter Occupied    | 105,789 56 | 3,150 | 84 | 2,153 | 70 | 1,988 | 69 | 2,652 | 69 |
| Nonwhite Renters   | 3,550 3.4  | 2,249 | 71 | 677   | 32 | 252   | 13 | 117   | 5  |

These four zones show a rate of home ownership lower than that for the city and a rate of renting higher than the city average. Both of these rates show change from zone to zone, with the former increasing and the latter decreasing as one moves out from zone 1 to zone 4.

The change is from lesser standards toward a closer approximation of the citywide norm. Read horizontally, the two rows on nonwhite tenure show a progressive diminution from zones 1 to 4 which simply reflects the decreasing numbers of nonwhites in census tracts the further one moves from the tracts of densest concentration. If we refer back to Table 4, we can recall that Negroes comprised 76%, 45%, 18%, and 9% of Tracts 1 through 4 and they also compose close to these figures of the owner and renters of their respective tracts, even exceeding the anticipated ownership figure in zone 2. Only in zone 3 does the ownership rate slump far below the actual proportion of Negroes present.

TABLE 29.

|                                    | Zone             | s 1      | Zon      | 2        | Zon      | e 3      | Zone     | 4        |

#### V. SUMMARY AND CONCLUSIONS

ره.

The reader who has worked his way carefully through the body of this report may have remarked that much has been left unsaid. It is true that certain material was organized and presented without any attempt at analysis. This is not to deny the intrinsic interest or possible relevance of these data. However, in this present context it was thought best not to attempt too much: if we have sketched a general map of the social terrain it will be sufficient, and others with more particular interests can perform the requisite intensive reworking and exhaustive analysis of those features which most concern them.

The simple descriptive statistics which are the heart of this study have conveyed two impressions which were pointed out time and again. These impressions - as profound as they are unoriginal - help sum up a complex and dynamic situation. The first is that census tracts, singly or organized into zones, evidence the ecological distribution of social phenomena. This has become a sociological commonplace. Such ecological distributions are measured and typified by the gradient, i.e., a line drawn outward from the center of the city would show along its length a progressive increase in the measures of socio-economic status and a concommitant pregressive decline in the incidence of rates of social disorganization. The second impression, derived from the evidence collected by our own project, is that the similarities in the socio-economic composition of the Negro population, regardless of location within the four zones studied, is more impressive than any differences found between them.

In short, white persons within the city have distributed themselves residentially in a manner expressed by the gradients while no such patterning is clearly discernible among the Negroes studied.

What I am trying to convey is that the Negro population is residentially homogenized. The free choice of residence in the open housing market which ecologically stratifies most of our population in terms of income, education, and occupation, is not operative in the case of Negroes. All those restricted within the arbitrary confires of the racial ghetto must find shelter as best they can within its circumscribed bounds. The Negro middle and upper classes, regardless of their education, skills, professional accomplishments — if their skin is dark — must reside in the slum. The fact that they dislike the disorganizing and predatory features of the slum as greatly as do their white social status counterparts avails them naught.

A democratic society is not "classless;" it is stratified as is any other form of human social organization. Democracy does, however, maximize the individual's opportunity to develop and realize whatever potential he may possess, hence to occupy the social stratum of which he is most deserving. The free enterprise market, in its

Many of the student interviewers volunteered as one of their impressions the marked contrasts between the homes they visited. On the same block, sometimes next door to each other, would be comfortable, decrous homes on the one hand and quite mean and impoverished ones on the other.

Students were nearly unanimous in feeling that the interviewing contact and home visits with Negroes were highly satisfactery educationally and beneficial democratically. If this was not so patently true, it would be almost pathetic that so little contact should bulk so large as "interracial" experience.

ideal operation, supports the democratic society in that it is rational in its calculations, i.e. the market functions in terms of supply and demand rather than in terms of the personality, name, traditional status, etc. of the participants in the economy. Such an economic system is a democratizing influence not only because it enables individuals to profit solely on the basis of ability but it also permits them to enjoy their success subject only to their ability to pay. Theoretically, all can participate in the competitive process and all can enjoy its fruits without reference to such irrelevant considerations as sex, race, religion, and national origin. This is not only theory - it is a right guaranteed by the Constitution.

..

Although Negroes increasingly are enjoying greater apportunities to participate freely in the economy, our data suggests they are not receiving similar opportunities to participate in the "social" aspects of society. There is a lag between the rights to produce which have been won and the rights to consume (as equals) which are still denied. Although there are undoubtedly some Negroes, among the small number living outside the 29 census tracts in the oldest part of the city which comprised our four zones, who have been able to secure housing and community commensurate with their social status and standard of values, they are an almost negligible percentage. At the present time, most Negroes must locate within the portions of the city already opened and available to anonwhites." This means that the movement of Negroes and other racial minorities into an area ceincides with the withdrawal of white persons out of it. These areas invariably are the eldest and most deteriorated parts of the city, and although some homes may be purchased and

maintained by wealthier individuals moving in, other structures will be subdivided and rented to the less well-to-do by entrepreneurs who specialize in that sort of operation. It becomes exceedingly difficult under these circumstances for a community to develop a consistent character which may be identified with some particular social status, e.g. middle-class. The Hyde Park-Kenwood Community Conference made an important contribution to our understanding of these housing dynamics by its demonstration of community maintenance through the enforcement of housing standards rather than racial barriers.

The homogeneity of social composition of the Negro population in the four zones - and the inferior condition of housing in those zones - indicates that the old and unfortunate process of gradual expansion along with lack of status differentiation of "nonwhite sections" of the city is continuing. The crowning irony is to be found in the intellectual baggage of the prejudiced individual who insists that Negroes be kept segregated, i.e. he denies Negroes the possibility to differentiate themselves through free selective settlement, and — then insists that the homogenized slum which results is because "they're all alike." This is the self-confirming prophecy with a vengeance.

HONORARY MEMBER Min Mable Raimey

Dear Citizen of Milwaukee:

This tetter will serve to introduce a student at who is participating in a study of housing and housing conditions in the near northside community of Milwaukee.

The housing study is under the sponsorship of the Intercollegiate Council on intergroup Relations, and is being undertaken at the request of the Milwaukee Urban League. The Intercollegiate Council has four membership schools: Wisconsin State College, Alverno College, Marquette University and the Milwaukee School of Engineering. In addition, the Council has cooperating members representing three local intergroup relations agencies: Milwaukee Urban League, National Conference of Christians and Jews, and the Milwaukee Commission on Human Rights.

Approximately 400 other homesites are being visited in an effort to obtain significant housing data. It is hoped to collect sufficient information to make statistical comparisons between housing occupied by white and Negro families, relative to percentage of home owner—ship, kind and type of facilities available, cost, number of residents, etc.

It is not necessary for you to give the interviewer your name, and you may rest assured that any information received will be considered entirely confidential.

We thank you greatly for your cooperation. Should you desire, we will be glad to furnish you a summary of the results of this research.

Sincerely yours,

INTERCOLLEGIATE COUNCIL
OF INTERGROUP RELATIONS

Fred Kaufman / 14

Fred Kaufman President MILWAUKEE URBAN LEAGUE

William V. Kelley Executive Secretary

#### INSTRUCTIONS FOR INTERVIEWERS

You are acting in a professional capacity as representatives of your respective schools and of the city of Milwaukee. Please dress and act accordingly. Remember to be courteous and mature at all times.

Read the interview form over carefully in advance so that you may ask the person supervising your interviews for information to clear up any difficulty of interpretation that may arise.

The addresses on the sampling list were drawn randomly and will not always correctly indicate Negro occupancy. Since this is a study of Negro occupied dwellings in Milwaukee, do not interview where the occupying family is white or part-white (mixed marriage). Inquire of them where the closest Negro occupied dwellings is located and proceed to it as the interview best corresponding to the original sample address.

Where the interview stimulates conversation and extended discussion from the respondents, the interviewer should record as much of this as he can recall as soon after the close of each interview as possible. Do this either on the back of the questionnaire or on a separate sheet of paper which should be attached to the correct interview.

After completing the interview and leaving the premises, record on the top of the interview the address of the home studied.

#### MILWAUKEE INTERCOLLEGIATE COUNCIL QUESTIONNAIRE ON HOUSING

## A. STRUCTURE

| 1.   | (a) single family, (b) single family subdivided, (c) duplex, (d) duplex subdivided, (e) spartment house, (f) rooming house.   |
|------|---|
|      | (Note or inquire about the possibility of there being more than one structure on this lot, usually this will take the form of one house built right behind another and identified by the same numeral address with an a, b, or c tacked on to it. If there is such a building, select it as your next stop for interviewing.) |
| 2.   | (a) brick, (b) frame, (c) composition, (d) other  |
| 3.   | Rooms (indicate the number of each found in the structure) (a) bedrooms, (b) living rooms, (c) bathrooms (d) kitchens, (e) closets, (f) others, such as basement, attic or porch rooms  |
| 4.   | Who is supposed to be financially responsible for maintenance and repairs, (a) owner, (b) tenent.   |
| 5•   | Who actually takes care of maintenance and repairs, (a) owner, (b) tenant.  |
| 6.   | <pre>gstimeted time to get repairs made after a complaint</pre>   |
| 7.   | Who is responsible for decorating (paint, paper, etc.) (a) owner, (b) tenant.   |
| 8.   | When was decorating last done in your living quarters(in months, years, etc.)   |
|      | B. FACILITIES   |
| I.   | Plumbing  |
| 9.   | (a) private bath, (b) shared hall toilst, (c) outdoors, (d) other.  |
| 10.  | (e) hot-cold running water, (b) cold only, (c) no running water, (d) must fetch from shared tap.  |
| 11.  | (a) private bath-shower, (b) shared bath, (c) no bath,  |
| II.  | Lighting  |
| 12.  | (a) electric lighting, (b) lamps, (c) candles, (d) other  |
| 13.  | now many outlets per room   |
| 14.  | how frequently are fuses blown  |
| III. | Hesting   |
| 15.  | (a) central heating, (b) space heating, (c) spot heating, (d) other   |
| 16.  | Fuel: (a) cil, (b) gas, (c) coal, (d) electricity, (e) wood, (f) other  |
| 17.  | Estimate of adequacy of heating: (a) occupant; (b) interviewed  |

| TA. GOORTUG | IV. | Cocking |
|-------------|-----|---------|
|-------------|-----|---------|

- 18. (a) stove, (b) hot-plate, (c) facility shared with others, (d) no facility
- 19. Is the above stove (a) electric, (b) gas, (c) coal, (d) wood, (e) other \_\_\_\_.
- 20. Number of cooking burners available, counting a stove's oven as 1 (one) \_\_\_\_\_

#### V. Perishable Food Storage

- 21. (a) refrigerator, (b) ice-box, (c) window box, (d) none (e) other \_\_\_\_\_
- 22. Is facility checked above (a) private, or (b) shared.
- 23. Is there a freezer, (a) yes, (b) no.

#### VI. Laundry

- 24. (a) automatic washer, (b) semi-automatic, (c) tub and board, (d) none.
- Is facility checked above (a) private, or (b) shared.
- 26. Do you use a dryer, (a) private, or (b) shared.

#### VII. Recreation

27. (a) radio, (b) phonograph, (c) TV, (d) piano, (e) other musical instrument (f) telephone, (g) game equipment (ping-pong, billiards, scrabble, etc.) (h) library, (i) hobbies (list) (j) automobile (make and year)

## VIII. Living Room Furnishings

- 28. (a) carpeting, (b) rugs, (c) lincleum, (d) bare floor, (e) other
- 29. (a) drapes, (b) curtains, (c) blinds, (d) shades, (e) bare windows, (f) other \_\_\_\_\_.
- 30. estimate of furniture: (a) insdequate, (b) adequate but worn, (c) adequate and new or in good repair, (d) comfortable or luxurious.

#### C. OCCUPANCY - TENURE - SOCIO-ECONOMIC STATUS

- 31. Do you (a) own, (b) rent, or (c) sublet.
- 32. If you rent or pay mortgage, what is your monthly payment \$\_\_\_\_\_
- 33. What does this payment include (hest, light, linen, furnished, etc.
- 34. What is the race of the person from whom you rent or from whom you purchased this building, (a) Negro, (b) white.
- 35. How long have you lived in this building ? in Milwaukee \_\_\_\_?

|            | 7   |
|------------|---|
| <b>36.</b> | Where did you live just previous to coming to Milwaukee (city and state)  |
| 37.        | Where were you born (city and state)  |
| 38.        | Have you tried to live elsewhere in the city unsuccessfully? that is have you tried to own or rent and been turned down because of discrimination |
| 39•        | Are you setisfied with this present home? Where would you prefer to live if you could move?   |
| 40.        | Have you ever considered building your own home rather than renting or buying? (a) Yes, (b) No.   |
| 41.        | If answer is Yes and you did not build, why?  |
| 42.        | Do you have much contact with the neighbors, (a) Yes, (b) No  |
| 43.        | How do you get slong with them?   |
| 44.        | Are you friendly with other than your Negro neighbors?  |
| 45.        | What is the age of the head of the family?  |
| 46.        | What is the highest grade of school completed of head of family   |
| 47.        | Occupation  |
